

PRESS RELEASE

An uncertain but certainly technological future

A new RE.SCHOOL webinar to discuss how schools should prepare their students for the digital revolution

Barcelona, November 25, 2020. What at the beginning of the 21st century was a desire and a gradual evolution, in less than a year has become a reality and a revolution that has turned teaching around.

More and more schools have tablets and computers for their students and yet that is not enough. According to the World Economic Forum, 65% of the children who entered primary school in 2017 will have jobs that do not yet exist and for which the education they receive today will fail to prepare them. What should we prepare them for? And how? The reality is that we train future professionals in an intuited but unknown world, a real challenge... How and what should we teach them?

Help us to promote our free event to talk about the digital challenge. On December 2nd at 5 pm (UK) / 12 pm EST (US), the webinar *There is no future without digital skills. How schools can prepare their students for the digital revolution* will take place with the participation of:

Richard. A. Carranza. Chancellor at NYC Department of Education. He manages the city's public school system with over 1.1 million students in over 1,800 schools. He believes that a great education changes lives.

Paul Jackson. Headteacher of Manorfield Primary and an accredited Local Leader of Education. Paul, a regular speaker at conferences, is passionate about creative education and inspiring learning experiences.

Hannah Margrett. Head of English at St Paul's School and advocate for literature in the English language classroom. She was part of the team which brought iPads into the St Paul's classrooms, one of the first schools in Spain to do so.

The free webinar is aimed at everyone related to the education sector, especially headmasters and primary and secondary education teachers. These three renowned experts will discuss the future with and without digital tools, and help us create a real digital revolution in our schools.

About RE.SCHOOL

RE.SCHOOL is an initiative driven by Sven Huber and Cristina Puig, two of the most successful entrepreneurs in the Spanish educational system. With extensive international experience behind them, they developed their first educational project in 2011, Boolino, which quickly became the largest Spanish-speaking reading recommendation platform. After their experience in different business models related to promoting reading in families, Sven and Cristina directed their steps towards the educational sector. Faithful to their mission of encouraging young people to read, they developed the Fiction Express platform, winner of multiple international awards, including the Bett Awards 2020, Education Resources Awards 2019 and Teach Primary 5* Awards 2019. It is amongst the start-ups with the most projected growth in the current Spanish EdTech scene.
